Agilence

Turn the Tables:

Put a stop to restaurant employee behaviors that drain profits.

Agilence Analytics Identifies Internal Theft

Agilence Analytics provides restaurant owners with valuable insights into both specific instances and ongoing trends of internal theft. These insights enable proactive identification of common employee theft activities, facilitating the implementation of preventive measures to curb such behaviors before they escalate.

- **Abuse of Employee Meal Policies:** Identify misuse of free or discounted meals, including giving away unauthorized comps, or promos.
- **Cash Transaction Frauds:** Identify instances of cash transaction abuse such as applying unauthorized discounts or ringing up cheaper items and pocketing the difference.
- **Repeated Item Voiding:** Build profiles through tracking repeatedly voided items as this is a common scheme which servers engage in and repeat multiple times.

- **No Sale/Void Transactions After Cash Sales:** Alert on no-sale transactions or voids post-cash sales to identify employees who may be pocketing cash.
- **Skimming Through $0 Transactions:** Monitor transactions to detect item ring-ups followed by voids after cash transactions, which can indicate employee theft.
- **Split Checks with Voids:** Alert on suspicious activity such as splitting checks and voiding items to prevent potential cash theft. This may commonly be known as the 'Wagon Wheel Scheme.'

Monitor Your Investigations with Ease

Known for designing secure, easy-to-operate loss prevention solutions, Agilence Case Management is no different. It's user-friendly, configurable, and reliable. Coupled with Agilence Analytics, you'll have a comprehensive solution that covers all your investigative needs— from case initiation to closure and analysis.

Agilence Case Management lets you track, document, and analyze all the details surrounding your investigations, making it a must-have tool for restaurants.

75% of restaurant inventory shrinkage in the US is due to employee theft
